

Sydney, Australia – 27 March, 2008. For immediate release.

Spatial Freedom release new Astroid drivers for SolidWorks

Spatial Freedom announces their latest release of the Astroid[®] add-in software for SolidWorks[®]. The new release, version 1.4, adds a view center control mode and can now provide control in non-primary windows. The new software is available immediately and can be downloaded at www.spatialfreedom.com

The Astroid 3D mouse is typically used in conjunction with a standard 2D mouse. The Astroid is used for view control while the 2D mouse continues to be used to pick menus, icons and other normal mouse activities. This reduces the load on the user's hand and speeds up interaction as view control becomes a natural push/twist action.

The Astroid add-in for SolidWorks adds a new drop down menu, an Astroid Options dialog box and displays a small graphic indicating the Astroid spin center in the active view. There are two modes of motion control and ten drop down commands.

About Spatial Freedom Pty. Ltd.

Spatial Freedom was founded by John Hilton to commercialize Orion[™] hardware and SUI software technologies. His vision for a new generation low cost spatial controllers for the 3D graphics industry led to the development of the Orion and Astroid SUI technologies now delivered as the Astroid 6000, the first truly affordable and highly functional, spatial controller for the CAD industry. For more information see www.spatialfreedom.com

Astroid is a registered trademark and Orion and Astroid SUI are trademarks of Spatial Freedom Holdings Pty Ltd. All other marks are the property of their respective owners.
